My Prompt Engineering task

The following is the list of all the prompts that I input into the Gemini 3 chatbot within MS Studio Code, in order to make desired edits to my portfolio website/page, and publish it to the GitHub website. These prompts and the resulting web page showcase the results of my work with AI Prompt Engineering. Yes, entirely all of the changes made to this website/page were performed by AI by my prompting it as such .

1. If I give you a url link to my GitHub portfolio website can you pull down a copy of the files so we can work on making some changes to it?
2. I prefer to provide you with the URL to my GitHub Portfolio repo. Here it is <https://github.com/michaelwestley/-MichaelWestley-portfolio>
3. Can you help me find the download of Git for Windows 11 and install it?
4. Check the version of git just installed and then proceed with the configuration adjustments that you suggested that you could make.
5. Yes, please go ahead and set my global user.name to "Michael Westley" and user.email to "michaelwestley@gmail.com".
6. Before we begin to make any edits to my project I noticed what might be a slight problem. Currently now there are two new folder on my local C: drive. One named "-MichaelWestley-portfolio-master" and the other named "-MichaelWestley-portfolio". Please keep the one that you need to operate properly and delete the one that is not needed.
7. At the bottom of the index.html page there is a Disclaimer section with text. Currently the text is "Disclaimer: The details on this website are purposely inaccurate and describe a hypothetical scenario developed to demonstrate professional capabilities and technical aspirations." I would like it to say this "Disclaimer: Some of the details on this website are purposely inaccurate and describe a hypothetical scenario developed to demonstrate professional capabilities and my technical aspirations."
8. Please commit this change but wait for me to direct you to push it to Github. I would first like to verify the change by reviewing it locally. The text to use for the commit is this "Update disclaimer".
9. Please append the following text to the sentence in the Disclaimer section that you just updated. "Some of the years in the Skills section are approximate and reflect my possible future skilling. The project summaries, with exception of the first one, were generated with the assistance of AI to illustrate how my extensive background in full-stack development, including work with Java and C# microservices, might eventually be integrated with my current pursuit of an IBM AI Developer certification. Please

contact me for current detailed information and my professional resume."

10. Yes, please commit this latest change using the message you suggested.

11. I would like you to duplicate and add the first bullet point in the Projects section on this web page with the header "Enterprise AI-Driven Log Analyzer" . It should be using the same font, format and style as the others. Once that is done, and I have reviewed that change we will work on updating the title and content of it.

12. The update you just made looks correct. Now rename the duplicate project card you just created so it reads "AI Generated Book Study Guide" instead of "Enterprise AI-Driven Log Analyzer".

13. Almost correct. Now swap the first two project cards in the Projects section so that the first card is the second one and the second card appears first.

14. Now update the text of the first project card in the Projects section to read as follows. "I utilized Google's Gemini 3 chatbot and prompted it to digest a book in pdf format. I then instructed it to generate questions for each chapter in order to create a book study guide to be used in my weekly Bible study group meeting." The text "book study guide" in this sentence should be formatted a a link to a pdf file that I will supply later.

15. The text "digest a book in pdf format." in the text body of the first card in the Project section should read "digest a book that was in pdf format."

16. The text "instructed it" in the project card you just changed should be a link to a file named "book-study-guide-prompt.pdf".

17. Please append the following sentence to the first project card description of the Projects section of this document. "This activity shows that I possess the fundamental skills of an AI Prompt Engineer (aka Vibe Coding)." The text "Vibe Coding" in this new sentence should be a link to the following file Vibe Coding definition.png" in the folder html_finalprojimages.

18. I would like to modify each of the Project cards in the Projects section of this document to display an alt tag type message when mouseover occurs. Can you do that by modifying the CSS?

19. Update the text of the tooltip that is display when mousing over the first project card to read "This one is real!" Modify the tooltips for the remaining cards to say "AI Generated...".

20. I uploaded a pdf file named "book-study-guide.pdf" that is to be displayed when the user clicks on the link "book study guide" in the text of the first card in the Projects section. Please make modifications required to make sure that link works.

21. Ok, i have uploaded the pdf into the root folder of the repo. Is is now there to be displayed upon clicking the link.

22. Please commit the current changes so far with the message "Add the AI generated study guide file to the root folder and link to it on the page."

23. Yes, please push the changes in the branch to GitHub now.

24. Please prepare a PR so that all these changes can be "published" to the live website.

25. Could you collect all of the input prompts that I have entered in this session and produce a Word file?

26. Ok, i have uploaded the pdf into the root folder of the repo. It is now there to be displayed upon clicking the link.

27. Please commit the current changes so far with the message "Add the AI generated study guide file to the root folder and link to it on the page."

28. Yes, please push the changes in the branch to GitHub now.

29. Please prepare a PR so that all these changes can be "published" to the live website.
